

# EXAM MANUAL

- 1) CERTIFICATION PROCESS
- 2) EXAM LAB CONFIGURATION
- 3) UPLOAD THE REPORT

eLearnSecurity has been chosen by students in 140 countries in the world  
and by leading organizations such as:

## I. CERTIFICATION PROCESS

### STEP 1: OBTAIN A VOUCHER

Whether you are attempting the eCTHPv2 certification exam on your own, or after having attended one of our approved training courses, you will need to obtain a voucher before you can start your certification process.

Once you obtain the voucher, you will receive login credentials to our Certification Area where you can manage the exam, VPN credentials, and anything related to the certification process—from the beginning through the electronic delivery of your certificate.

### STEP 2: BEGIN THE CERTIFICATION PROCESS

Regular vouchers expire after 180 days from purchase.

Infinity vouchers do not expire.

Before the voucher expires, you will have to begin the certification process by clicking on the "Begin certification process" button inside the *Exams* tab of the member's area.

**Begin certification process**

The expiration date will always be visible in your certification area and reminder emails are sent to make sure you take advantage of the voucher.

## STEP 3: PERFORM YOUR TESTS

As soon as you click on the "Begin certification process" button, you will find the instructions regarding the scope of engagement.

Specifically, you will come across a letter of engagement that will contain exactly what you should examine and how.

At this point, you will start your threat hunting activities utilizing the provided data; take note of your findings and start creating your report.

The dedicated exam network will be available to you 24/7 for 2 days.

At any time, you will be the only one on the network. You will be able to reset the scenario, should you damage it during your examinations.

You can also pause the lab and resume from where you left off by simply clicking the Start/Stop buttons in the Certification area, as you would with any other Hera Lab scenario.

## STEP 4: UPLOAD YOUR REPORT

Once you have performed a comprehensive threat hunt, it's time to finalize documenting the threat identification steps.

Familiarity with reporting activities is assumed, so no commercial-grade report will be required during the eCTHPv2 examination process. You will be required to thoroughly document how you identified each threat though, to prove your findings. For exact guidelines on how to construct your report, refer to sections 3 and 4 of the Letter of Engagement.

Once completed, you will upload your report in PDF format for review. This must be done no later than 4 days from the beginning of the certification process (Step 2).

## STEP 5: OBTAIN RESULTS

One of our instructors will carefully review your report. If your findings, and your threat hunting skills are deemed sufficient to pass the exam, you will be granted the eCTHPv2 certification.

Should you fail the first attempt, the instructor will provide you with valuable feedback. Armed with this information, you will have a free retake which you can use to perform your tests and upload a new report.

The retake will commence the moment you view the instructor's feedback, or automatically 14 days after it is received.

As with your first attempt, you will be given another 2 days in which the exam lab network will be re-opened for further examinations.

Similarly, a new report should be created and uploaded. Make sure you regularly consult with the timers in the Member's area regarding the report-uploading deadline.

Once you pass the exam, you will find your digital certificate immediately verified and downloadable.

## II. EXAM LAB CONFIGURATION

The configuration of the exam lab is the same as the **Hera for THP** laboratories. If you don't know how to configure properly the environment please refer to the document:

[Hera Manual](#)

## III. UPLOAD THE REPORT

Once your Threat Hunt is complete, you can upload the report (pdf format) to the following box.

### Upload Your Report

(Format: pdf, zip, tar.gz; Max Size: 10MB)
